Sector Allocations⁴

Investment Approach

- Opportunistically invests across the fixed income universe, focusing on U.S. high-yield and investment grade municipal and corporate bonds
- Utilizes a research-intensive, bottom-up process to identify mispriced fixed income securities

Strategy Advantages

1. Total return emphasis, historically deriving approximately 50% of total return from capital appreciation since inception
2. Low correlation to the Bloomberg Barclays US Aggregate Bond Index
3. Potential for tax-advantaged income distributions

IMPORTANT INFORMATION AND DEFINITIONS

INVESTMENTS ARE NOT FDIC INSURED OR BANK GUARANTEED AND MAY LOSE VALUE.

Investors should consider a fund's investment objectives, risks, charges and expenses carefully before investing. The prospectus contains this and other information about a fund. To obtain a prospectus, visit www.sheltoncap.com or call (800) 955-9988. A prospectus should be read carefully before investing.

Mutual fund investing involves risk, including possible loss of principal. Credit-related instruments typically decrease in value when interest rates increase. Concentration in a small number of issuers increases the risk that one issuer could have a large adverse impact on the Fund's return. Borrowing and frequent trading could increase the Fund's operating expenses. High-yield bonds involve greater risk of default, and may be more volatile and less liquid, than investment grade securities. Subordinated and unsecured loans may be disproportionately affected by default and downgrade. Foreign investments may be adversely affected by currency fluctuations, lower liquidity, tax regulation, and political instability. Derivatives can be highly illiquid and difficult to unwind. The Fund's short positions may equal up to 100% of the Fund's net asset value. Short sales theoretically involve unlimited loss potential since the market price of securities sold short may continuously increase.

The Bloomberg Barclay U.S. Aggregate Bond Index is an unmanaged index of the U.S. dollar-denominated investment grade fixed-rate taxable bond market. It includes government, corporate, mortgage-backed, and asset-backed debt securities with a maturity of at least 1 year. It is not possible to directly invest in an index.

SEC Yield is an annualized rate derived by dividing the fund's net investment income over a 30-day period by its offering price on the last day of the period. The net figures reflect the expense limitation agreement while the gross figures do not. The Fund's actual distribution rate may differ from its SEC Yield.
